

Fieldpass

Beta Testing Report

Company: Quad Data Sdn Bhd

Date: 06 May 2026

Version: 1.0

Confidentiality: Internal use

1. Overview

This beta testing report documents functional verification of Fieldpass across key user roles and their major workflows:

- Superadmin: user roles and permissions management
- Association Manager: association-level administration workflows
- Club Manager: club-level workflows and club dashboard access
- Player: player login and player dashboard access

Objectives

- Confirm role-based access control (RBAC) behaves as expected.
- Validate primary end-to-end workflows for each role.
- Record results and defects for follow-up before wider rollout.

Exit criteria

- No critical severity defects in authentication, authorization, or core workflows.
- All high-priority test cases pass (or have an approved mitigation).

2. Test Environment

Environments used

- Local development environment (developer workstation)
- Beta server environment (DigitalOcean droplet / containerized deployment)

Test data

- Admin accounts for: Superadmin, Association Manager, Club Manager
- Player accounts for: OTP/password login (as configured)
- Representative entities: association(s), club(s), competitions/matches (where applicable)

Tools

- Web browser (Chromium-based)
- Server logs: Nginx + container logs
- Database inspection (read-only) as needed to validate writes

3. Beta Test Coverage & Results

Note: Results are captured as **Pass / Fail / Not Tested** with optional notes. Defects discovered should be logged with severity (Critical/High/Medium/Low) and reproduction steps.

3.1 Superadmin — User Roles & Permissions

Scope

- Roles management (create/edit)
- Permissions assignment by group
- Admin creation and role assignment
- Validation of RBAC impact on sidebar navigation and route access

Test cases

- Create a new role and assign a permission group (e.g., dashboard.view). Result: _____
- Edit an existing role; toggle permissions on/off; verify saved. Result: _____
- Create admin user; assign role; confirm login and menu visibility. Result: _____
- Remove permission from a role; confirm restricted page returns 403. Result: _____
- Verify superadmin can access management pages (admins/roles). Result: _____

Expected outcomes

- Role changes immediately affect authorization (after permission cache refresh).
- Unauthorized routes are blocked (403) and UI navigation hides restricted items.

3.2 Association Manager Functions

Scope

- Association dashboard access
- Association-scoped admin/user management (where allowed)
- Competition creation/management and invitations (as configured)
- Club visibility and access limited to association scope

Test cases

- Login as Association Manager; dashboard renders association context. Result: _____
- View competitions list; verify only association competitions shown. Result: _____
- Create/update competition (if enabled); verify persisted. Result: _____
- Manage competition invitations; approve/reject flow. Result: _____
- Create Club Manager (or allowed roles) under association and link to club. Result: _____
- Attempt to access out-of-scope association data; expect 403/hidden. Result: _____

Expected outcomes

- Data and actions are constrained to the manager's association.
- Unauthorized cross-association access is blocked.

3.3 Club Manager Functions

Scope

- Club dashboard access and club context display
- Club profile/edit access (if permitted)
- Club-level workflows: players list/invite/bulk upload (as configured)
- Club operational pages: training management, match/lineup flows (as configured)
- Budget & expenses page: CRUD, filters, sorting, club scoping

Test cases

- Login as Club Manager; club dashboard loads with correct club name/logo. Result: _____
- Edit club profile (if enabled); verify updates persist. Result: _____
- Players: view list; invite/add; ensure club scoping. Result: _____
- Training: view attributes/training pages; add/update flows. Result: _____
- Matches: view fixtures; access match check-in/lineup (if enabled). Result: _____
- Budget & expenses: add item; edit item; delete item. Result: _____
- Budget & expenses: filter by year/month; sort by amount/name. Result: _____
- Verify club manager cannot access global clubs/matches pages if restricted. Result: _____

Expected outcomes

- Club Manager sees only club-scoped data.
- Pages not permitted by role are hidden and blocked server-side.

4. Player Login Functions

Scope

- Player login page access
- OTP/password flow (as configured)
- Player dashboard access and session handling
- Logout and re-login behavior

Test cases

- Navigate to player login; page renders. Result: _____
- Submit valid player credentials/OTP; login successful. Result: _____
- Submit invalid OTP/credentials; appropriate error shown. Result: _____
- Access player dashboard; verify correct identity/profile displayed. Result: _____
- Session timeout/refresh: verify expected behavior. Result: _____
- Logout and confirm protected player routes are inaccessible. Result: _____

Expected outcomes

- Successful authentication routes the player to the correct dashboard.
- Invalid authentication does not create a session.
- Protected routes require an active player session.

5. Defect Log (Beta)

Record defects discovered during beta testing. Add rows as needed.

Defect template

- ID: _____
- Title: _____
- Severity (Critical/High/Medium/Low): _____
- Role(s) affected: _____
- Environment (Local/Beta server): _____
- Steps to reproduce: _____
- Expected result: _____
- Actual result: _____
- Notes / screenshots: _____
